

Volumetric dispenser and Solution maker Tecnorama

Reference: RF001511

Tecnorama

Volumetric dispenser - Solution maker

model DOSORAMA - DYRAMA 4/R - 100

type V120

year 2000

120 positions, 32 Beckers

machine developed for the dosing of liquid products while preparing recipes in the laboratory of an industrial textile dyehouse.

Solution maker

This machine is ideal to prepare stock solutions. It combines reduced space requirements and a hundredth gram precision scale.

Settable with hot water, cold water and three auxiliary products for the dissolution process. The solution maker and the volumetric dispenser control software can be interfaced and share the same files so that the two machines become, as a matter of fact, a single unit made of two parts perfectly compatible, communicating and operated through one PC only.
