

## Hot-melt printing machine for film transfer mod. Film-Print

Reference: RF0050

Hot-melt printing of film transfer is possible. New and improved model with better printing performance and higher production speed. "Film print" allows to coat film with different patterns for the so-called transfer technology or fashion foils, widely used in fashion especially for bags, shoes and clothing decoration. This product is designed for decoration of different types of fabric, leather synthetic leather and textiles.

The technologic behind this machine is *the printing* of a special hot-melt resin on film that reproduces the required pattern, which is then transferred on fabric or leather with hot calenders, often with the addition of transfer papers or metallic foil to add special effects or colouring.

Details and strength

Compact design

Quick and easy installation, thanks to unwind, rewind and control panel directly mounted on machine frame.

Quick replacement system for printing rollers.

Web width

1.800 mm

Mechanical speed

0 – 30 m/min

Heating

Oil filled heated roller
