

## Embossing calender

Reference: RF00978

Smooth or embossed calendering of textiles, tnt, film or paper is possible.

Top roller is ground, chromed and reground to a mirror finish or engraved surface according to production requirements, steel pressure roller with nylon sleeve. Bottom roller can be moved vertically, towards the chromed roller, by a couple of hydraulic cylinders.

### Details and strength

The roller is mounted on a couple of lever mechanism so to be quickly and easily removable, should it be changed with an engraved roller.

Modular and compact design, customizable according to client's requirements.

### Web width

From 500 to 6000 mm

### Pressure/load

Calendering pressures are adjustable from 6 up to 60 tons.

### Mechanical speed

0 – 20 m/min.

### Heating

Oil filled and electrical heated roller or with external hot oil generator.
