

BRUSHING CLEANING SP-200

Reference: RF0070

The SP-200 brushing is a small and efficient cleaning machine easily applicable to any other machine where request.

Two brushes are working at the same time on the front and on the back of the fabric to assure the maximum efficiency.

The kind of brushes depends from the type of fabric processed.

The small dimension let it to be suitable for different applications.

The external suction unit is made up of an electric fan connected through flexible pipes to the filter or to other existing system.
